SUMMARY

Senior Software Developer with 5.3+ years of experience building production-grade applications across mobile, web, and backend. Sole or primary developer on 14+ repositories with 3,225+ commits. Proven track record in full-stack development (FastAPI, React, Vue, Swift, Flutter), cloud infrastructure (AWS, Terraform), CI/CD automation, and comprehensive testing (3,000+ automated tests). Experienced in platform architecture, system rewrites, and end-to-end product delivery.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Swift, PHP, Dart, Kotlin, SQL, HCL, Bash

Backend: FastAPI, Laravel, Node.js, Express, Celery, Redis, Pydantic, SQLAlchemy, Gunicorn

Frontend: React 19, Vue 3, Next.js, Vite, Tailwind CSS, MUI, PrimeVue, Redux Toolkit, Pinia

Mobile: Swift, UIKit, CoreData, SwiftData, Flutter, Dart, Alamofire, CocoaPods

Databases: PostgreSQL, MySQL, MongoDB, Redis, Firebase, SQLite, Liquibase

Cloud / Infra: AWS (EC2, S3, CloudFront, SES, SNS, Route53, ACM), Terraform, Docker, Apache

CI/CD / DevOps: Bitbucket Pipelines, Bitrise, BrowserStack, GitHub Actions, systemd

Testing: pytest, Vitest, Playwright, XCTest, XCUITest, Testing Library, PHPUnit

Architecture: SOLID, MVVM, Strategy Pattern, Dependency Injection, REST API Design, RBAC, JWT, OTP, RAG

PROFESSIONAL EXPERIENCE

Senior Software Developer

Nov 2023 - Present

VoloX Private Limited (Division of ITDM) | Chhatrapati Sambhaji Nagar, India

- Designed and built the VAPR product management platform end-to-end (FastAPI, Vue 3, PostgreSQL) with 40+ REST API endpoints, Celery-based async bulk CSV import handling 10,000+ products per file, passwordless OTP authentication via AWS SES/SNS, and a 20-permission RBAC system with JWT-embedded authorization and staleness detection
- Architected and shipped a field-service dispatch platform twice -- first in Laravel/PHP, then rewrote in FastAPI/Python + React 19 -- using a queue-based connector strategy pattern (SoD, AoD, Email, SMS) to orchestrate work orders across 7 deployment environments serving multiple clients
- Built offline-capable features for the RealCADENCE iOS app (Swift, SwiftData) including an API request queue manager with persistent offline execution, CoreData-to-SwiftData migration, and a task-oriented auto-advancing workflow mode used daily by field workers across cities
- Authored 3,000+ automated tests across 14 repositories using pytest, Vitest, Playwright, and XCUITest, achieving 100% line coverage on two React apps, 98.5% on the Vue frontend, and comprehensive XCUITest UI automation covering all iOS action completion types
- Created the shared @volox/trax-api-utils TypeScript library with 20+ API service classes, auth/session interceptors, and a semantic theme system, consumed by 3+ frontend applications, with a cross-repo consumer verification script validating releases before merge

- Provisioned AWS infrastructure via Terraform (EC2, S3, CloudFront with OAC, SES, Route53) with cloud-init bootstrap scripts and multi-environment configs, and built 10+ CI/CD pipelines (Bitbucket Pipelines) with zero-downtime symlink-swap deployments and post-deploy health checks
- Built an AI-powered conversational assistant using Google Gemini with ChromaDB-backed RAG, a domain-specific tool registry, and conversation session management for natural-language product queries
- Delivered 4+ React/Vue web portals including fleet vehicle management with CSV bulk upload, parking spot operational hours, BIS import status reporting, and a supervisor service-reviews portal with multi-tab filtering, i18n (EN/DE/ES), and cookie-based language detection
- Led full mobile development of Kerb Driver (Flutter, Firebase, Google Maps) for delivery drivers to book loading bays, optimizing state management by 30-40% with 100% unit test coverage. Shipped to App Store and Play Store

Junior Software Developer

Jun 2021 - Nov 2023

Aeologic Technologies

- Built the Flutter mobile app for Micro Center, one of the largest US electronics retailers with 30 stores and 22 million+ customers, delivering cross-platform product browsing and real-time store inventory
- Contributed to building and shipping 6+ production mobile applications (Flutter, Dart, Firebase) across retail, logistics, and enterprise domains
- Led development of a customer-facing app from scratch through to production deployment, earning direct client recognition for reliability
- Eliminated recurring production bugs by implementing comprehensive testing practices across multiple projects

KEY PROJECTS

VAPR (VoloX All Products Recognizer) -- Full-stack product management platform. FastAPI + Vue 3 + PostgreSQL. 40+ endpoints, Celery async processing, OTP auth, RBAC (20 permissions), AI agent with RAG, Terraform IaC. 1,090 tests, 23 database migrations. Sole developer (417 commits).

Service Dispatcher -- Field-service dispatch platform with queue-based connector architecture. Built in Laravel, then fully rewritten in FastAPI + React 19. ~1,805 tests across both generations. 7 deployment environments. Sole developer (765 commits).

RealCADENCE -- Enterprise iOS app (Swift, UIKit, CoreData/SwiftData) for field operations. Built offline mode, SwiftData migration, task-oriented workflow, XCUITest automation suite. Primary developer (597 commits).

Trax Service Portal -- React 19 supervisor portal for field-worker reflection reviews. Multi-tab filtering, i18n (EN/DE/ES), shared component library (@volox/trax-api-utils). Sole developer (572 commits).

Kerb Driver -- Flutter mobile app for delivery drivers to book loading bays. Google Maps integration, 100% unit test coverage, 30-40% performance improvement. Published on App Store and Play Store.

OPEN SOURCE

FreeVPN -- Open-source Android VPN client (Flutter, OpenVPN, Kotlin). ISP DNS bypass, config sanitization, reconnect loop detection. 115 unit tests.

ToolsHub -- Turborepo monorepo (Next.js, TypeScript) hosting 112 financial calculators and 150 developer tools with JSON-LD SEO.

EDUCATION

B.Sc in Information Technology

2018 - 2021
